WinUEFI User Manual

Welcome to the WinUEFI user manual! Here we will explain how to use our software and what it is.

What is it

WinUEFI helps you to easily get into your firmware settings (UEFI/BIOS). Here can settings such as time, boot device and other options be changed. This reboots your device directly into it with one click.

Installing

Assets

To install, first install the application from the latest release for your architecture and preferences. You can find it by clicking here.

☺

Here you see a list of assets. Choose the one with your PC architecture. Setup is to set it up and use it anytime easily, but the portable version is just the program file. Console version shows the console while running. BAT is the source script file. PS1 is the PowerShell script version. ZIP has a few of these versions in it.

Download

Click your preferred asset and it will start downloading. Maybe you have to click "Save (As)" to still download it. After this, open the file. It will ask for Admin privileges to run. BAT and PS1 needs to be ran as Admin manually. It will reboot your device into UEFI/BIOS now and you can change settings! For the setup: install with the on-screen instructions and open after finish from start menu or desktop.
